Member of Technical Staff, Platform | Wafer

Cover letter

Hi Wafer team,

I've called myself a technomancer since technology first felt like magic to me as a kid. These days I get that feeling when I can turn a messy system into something people can use without needing to know what's underneath. That's why your platform role caught my eye. Faster inference matters, but the app, APIs and dashboards are how customers actually get that value.

I've built and operated customer-facing software at Technomancy IT, including TypeScript and PostgreSQL workflows for service requests, client records and billing. At Front Range Internet, I replaced a billing system while also running hosted services and leading NOC escalations. At Office Evolution, I turned parts of network provisioning and troubleshooting into tools front-desk staff could use. I like being responsible for what people can do on day one and what the team can diagnose when something breaks later.

I'd bring that mix of product engineering and operations to making Wafer's platform reliable and easier to build on. TypeScript is my main language. I've used Python for scripting, and I'd ramp into your Python services from that base. I'm open to relocating to San Francisco for the onsite role.

Thanks,
Chad Koslovsky
